git & github tailwind

docker Next js

Typescript now have passion to learn about (React native, web

socket , clouding (aws , azure))

Projects

My Portfolio 🖸

Portfolio

Wealth makers 🖸

Project Description: The project is a platform that offers courses, bots, and recommendations in the field of trading. It has a network marketing system called the tree system, a marketing method that relies on users.

Details: I worked on this project as a front-end developer along with another colleague as part of a team. We used React.js and Tailwind CSS, as well as several libraries such as Toast and Yup. The back-end was designed using Node.js and MongoDB.

New Normal

Project Description: The project is a platform that offers courses, bots, and recommendations in the field of trading. It has a network marketing system called the tree system, a marketing method that relies on users.

Details: I worked on this project as a front-end developer along with another colleague as part of a team. We used React.js and Tailwind CSS, as well as several libraries such as Toast and Yup. The back-end was designed using Node.js and MongoDB. I also provided a custom-designed admin dashboard for the client to manage the website and monitor sales and purchases.

Welo 🛮

Project Description: This project relies on an API provided by an external company that offers specific courses with a monthly subscription. Those who subscribe to this API can sell the courses it provides. We display the data returned from the company's API, implemented a user database, and created our own payment system to handle orders.

Sanad 2

Project Description: This project is a platform for selling legal contracts in Saudi Arabia.

Hamad 🛮

Project Idea: This website facilitates travel procedures and document submission for any student who wants to pursue a PhD, Master's degree, or any other study in Europe.

"with the design of a dashboard that enables the admin to assign submitted orders to their employees and monitor these orders."

yes we can

Project Idea: This is a system for an organization that works on modifying human behaviors. Through this system, you can conduct tests on the treated individual by having their close associates answer some questions to verify whether the person's behavior has truly been modified.

Edaat 🛮

Project Description: This project is for a magazine called "Edaa't" and it is designed to broadcast the latest issues.

Education

Computer and artificial intellegence

Helwan University
